

**workato** | ACCELERATORS

# What's New | Accelerators

---

# Vision

Automation accelerators are **reusable** solutions that are designed to create an **“out of the box”** experience for customers in order for them to achieve **faster time to value**.

**01**

# **What are Automation Accelerators**

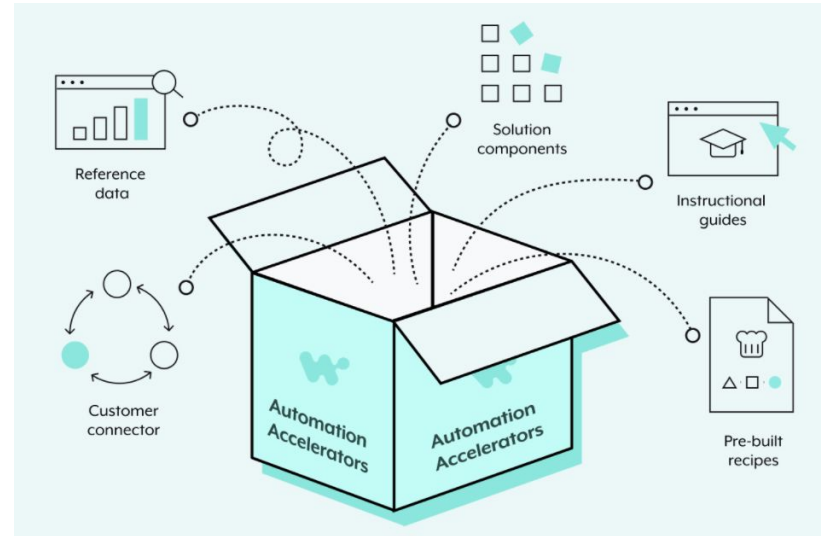

# Automation Accelerators

## What are Accelerators?

- Pre-packaged solutions to solve common automation use cases...“accelerate” the process
- Includes pre-built recipes, SDKs, reference data, instructional guides, etc.
- Fully customizable to meet the unique needs of customers

## History

- Launched Accelerators to the public during Automation (May 2021)

Pre-packaged Solutions for Common Automation Use-cases

**02**

# **Value Proposition**

# Accelerators Value Proposition

Customers will save many hours of design, development, testing and release with the accelerator packages

Are designed as modular building blocks

Patterns, mappings, and endpoints can be easily configured/changed

Represent best practices, standards that we recommend to the customers

Proven method in delivering the accelerators

**03**

# **Foundational Principles**

# Principles Of Building Accelerators

Cost effective

Simple and easy to use

60 - 70% code is static

Configurable and extensible

Standards defined and to be followed at every stage of accelerator life cycle

**04**

**Accelerators are “not”**

# What are NOT Accelerators

- Turn-key solutions
- Zero customization
- The price of the 3rd party apps is part of the package
- Catering to the customer specific requirements

**05**

# **Accelerators for Direct Customers**

# Direct Customers

## (Existing Accelerators)

## (New)

Enterprise Data Hub V2

Autonomous Ops Framework V2

Campaign Launchpad

OPA Manager V2

Approvals Bot for Slack / MS Teams V2

CI/CD Accelerator V3

Back-to-Office Bot

App Provisioning/Deprovisioning V2

Automation Training Manager New

ELT Pipeline V1.1

AI/ML Led automations V2

IT Help Desk Bot

Automation Quality & Security V2

Workday Revenue Management New

Order to Cash

Workday HR

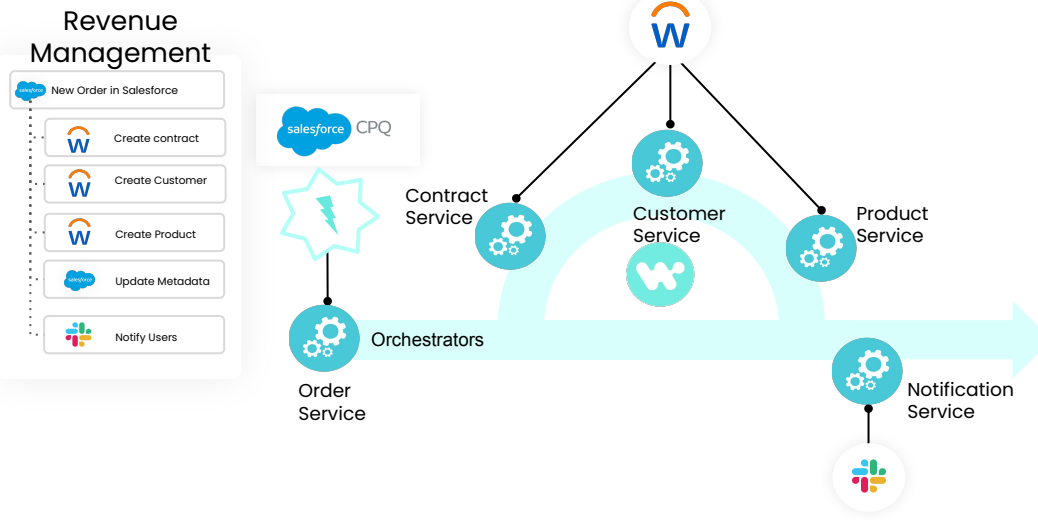

License Optimization V2.0.1

Sales Process & Forecasting Alignment V1.1

# New Accelerators

## Workday Revenue Management

### What is it?

- Framework for syncing orders from CRM to Workday for billing and revenue recognition

### Why is it valuable?

- Standardized way to sync orders from CRM to Workday
- Service based design with central orchestration recipes
- Common data model for interaction between services, Rule based notifications for change in status

Train, Enroll, Reports & Manage

Admin

Train, Progress Update

Trainee

workato | ACCELERATORS

## Automation Training Manager

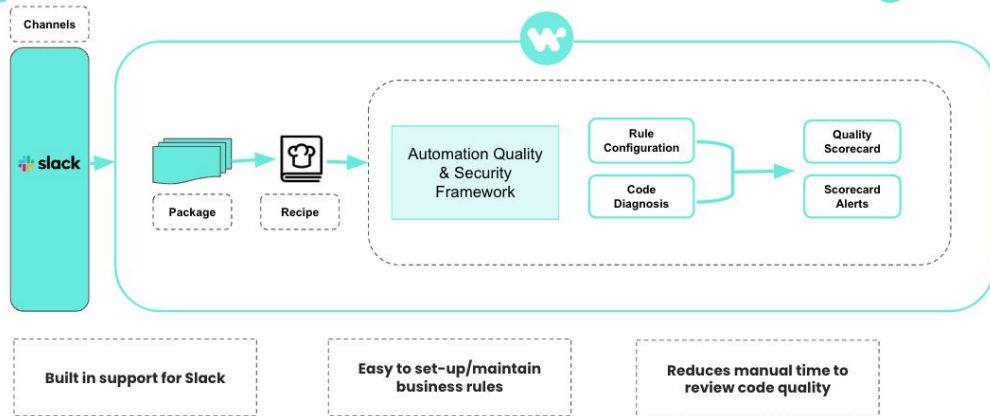

### What is it?

A training platform to provide personalized training plans based on individual learning needs to enable different personas within an organization

### Why is it valuable?

- Generate personalized training plan based on trainees role
- Admin page to view the training progress and to enroll team members
- Self assessment and training progress status update
- All Workato learning artifacts at single platform

# Major enhancements to the Existing Accelerators

## Automation Quality & Security V2.0

### What is it?

A framework to standardize and automate quality and security best practices for your automations

### Enhancements

Optimization of active recipes from 11 to less than 3

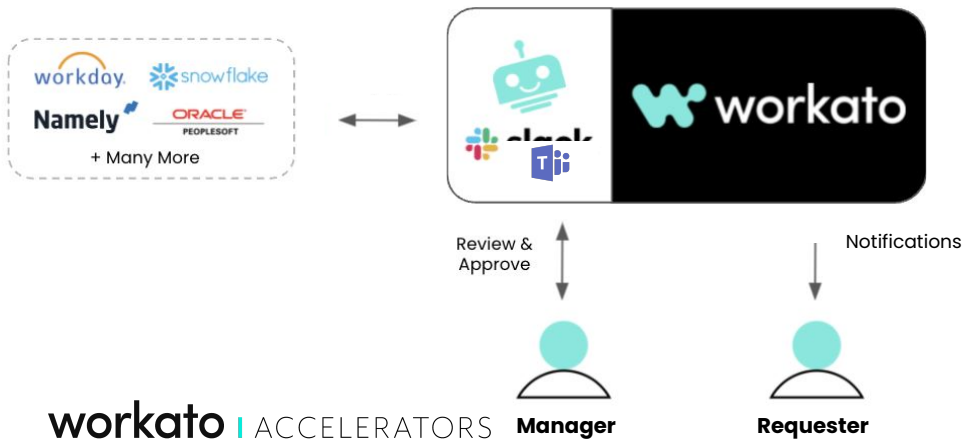

## Approval Bot V2.0

### What is it?

A standardized approach to automate how teams build approval workflow.

### Enhancements

- Multi-level approvals
- Multiple approvals at multi-level

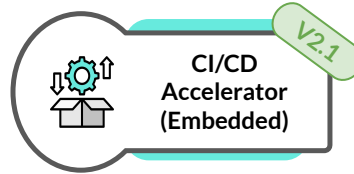

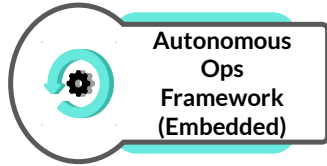

**08**

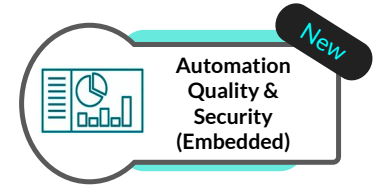

# **Accelerators for Embedded Business**

# Embedded Business

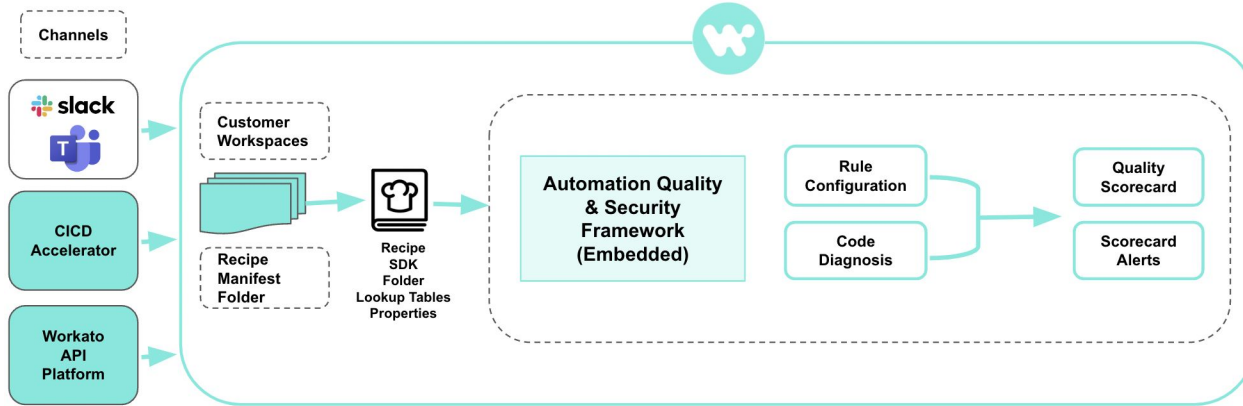

(Existing Accelerators)

(New)

# Embedded Business New Accelerator

## AQS V1.0

### What is it?

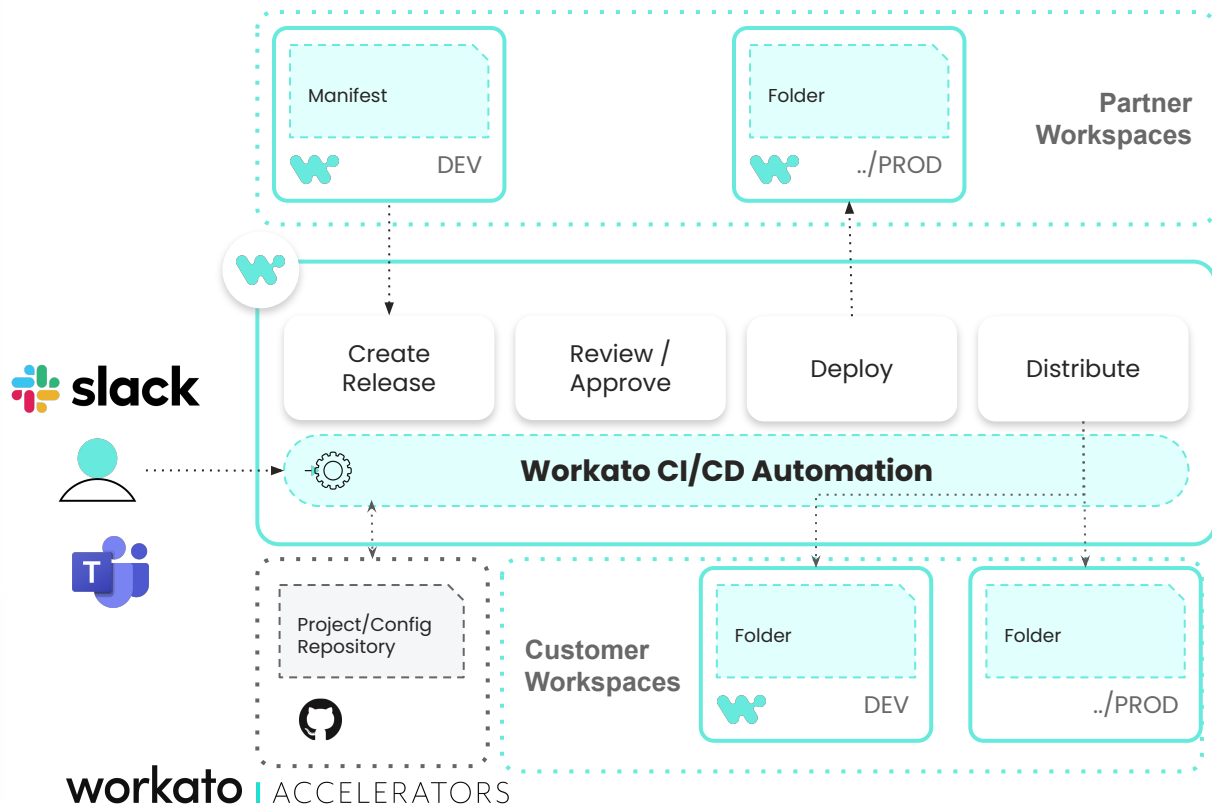

A framework to standardize and automate quality and security best practices for your automations.

#### Features

- Extendible rule based scanning of assets including SDK
- Scan customer workspaces
- Support for Integration with CICD pipelines, Accelerator
- On-demand scan of partner workspace assets
- Support for Slack & MS Team workbots
- Access control for admin Workbot UI

# Embedded Business

## Enhancements to the existing Accelerator

## CICD V2.1

### What is it?

A standardized approach to automate how teams build, test, and package their Workato recipes for delivery to multiple environments as well as customer workspaces

### Enhancements

- Simplified installation processes
- Support for multiple Data Centers
- More automation to GitHub repo creation process
- Support for Workato API scope based tokens
- Update to make it compatible for AQS Embedded
- Technical fixes and improvements

# Accelerator Docs

The screenshot shows the Workato Docs website in a Chrome browser window. The browser's address bar displays 'docs.workato.com'. The page header includes the Workato logo and navigation links for 'Product Updates', 'Status Page', 'Automation Institute', and 'To JA'. A search bar is prominently displayed with the text 'What are you looking for?' and a placeholder 'Type '/' to search from anywhere'. Below the search bar is a grid of 16 navigation links, each with an icon and a label. A large teal arrow points to the 'Accelerators' link, which is located in the bottom row, second column. The other links are: Getting Started, Recipe Design, Connectors, Accessing On-prem, API Platform, Workbot, Troubleshooting, Organization and Workspaces, Data and Security, Lifecycle and Operations, Connector SDK, Developer API, and Workato Embedded.

 Getting Started	 Recipe Design	 Connectors	 Accessing On-prem
 API Platform	 Workbot	 Troubleshooting	 Organization and Workspaces
 Data and Security	 Lifecycle and Operations	 Connector SDK	 Developer API
 Workato Embedded	 Accelerators

### About this accelerator

Workato enables your data scientists and machine learning engineers to focus on what they do best: build models. Some ML platforms, like AWS SageMaker, have autoML capabilities which can be driven directly from within Workato. AI ML Accelerator can easily integrate the deployed models into the IT landscape to drive intelligent automation solutions.

### Features and Benefits

- Unlock access to data with the ability to connect to thousands of enterprise business systems
- Transform data on the fly and load it into various databases, storage systems, and ML platforms
- Configuration-driven data validation
- Drive AutoML capabilities directly from within Workato
- Easily plug into deployed models for inference
- Evaluate ML model output to drive intelligent automation
- Integrate ML output or ML-driven automation back into business systems & processes

**Poll**

# Poll #1

**Automation Accelerators are collections of Workato assets designed to work together to solve common automation use cases across industries.**

- A. True
- B. False

# Poll #2

**Do you know that Workato delivers below types of accelerators:**

- *Technology accelerators*
- *Functional accelerators*
- *Application accelerators*

- A. Yes
- B. No

# Check #3

## Who can build accelerators:

- A. Workato
- B. Partners
- C. Customers
- D. All of the above

# Check #4

**Are accelerators available to be downloaded from the platform:**

- A. Yes
- B. No

# Poll #5

**Would you agree that accelerators can help you to speed-up the overall application delivery?**

- A. Yes
- B. No
